RECOMMENDATION

Use this page as the baseline. Sales per household per week (\$31.78) is the number every action on the next three pages should move.

DATA NOTE

Weeks 16 to 101. Day labels are relative (Day 0 is the first day of data), not real weekdays.

Customers

Who drives sales, who is slipping away, and do lapsed households come back?

Households vs sales by RFM segment

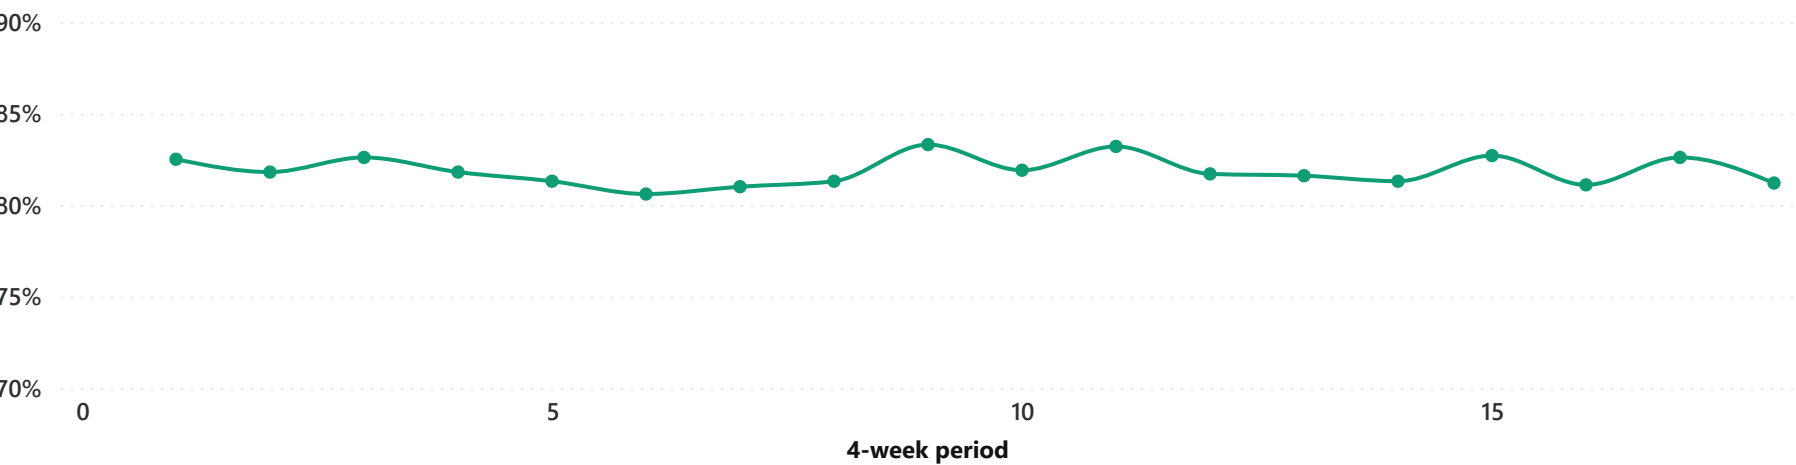

Champions are a quarter of households but half of sales.

● Share of households ● Share of sales

Active households by 4-week period

Share of households that shopped in each period. Axis starts at 70%. Fixed result from notebook 05.

At-risk households to win back

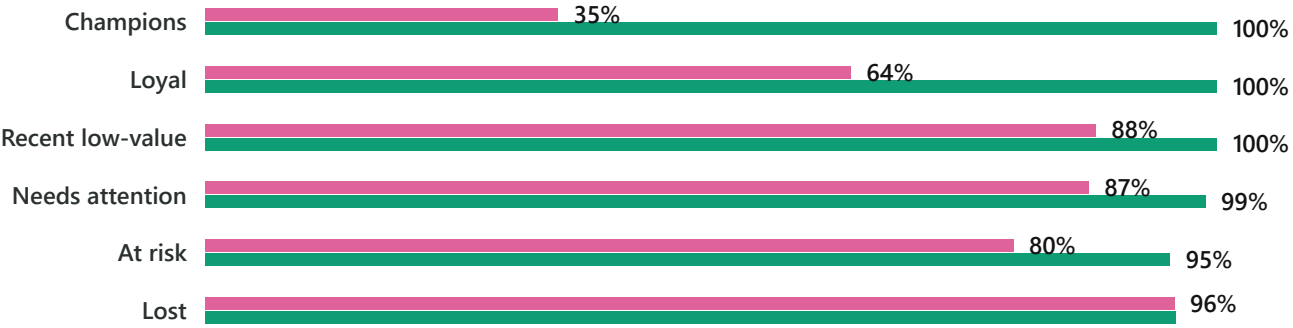

RFM segment 'At risk', highest weekly spend first. Contact them before they pass their own lapse threshold.

Household	Frequency tier	Spend per week	Days since last visit	Lapse threshold (days)	Income	Total sales
232	3: heavy	\$115.90	33	23	35-49K	\$9,968
2318	3: heavy	\$104.12	83	23	Under 15K	\$8,954
149	3: heavy	\$94.56	54	23	35-49K	\$8,132
2294	3: heavy	\$89.12	23	23	25-34K	\$7,575
1110	Not in baseline	\$86.57	15		No demographics	\$5,454
1529	3: heavy	\$85.27	11	23	50-74K	\$7,333
Total						\$854,851

Lapse and return by segment

Share of households that lapsed, and share of those that came back.

● Lapsed ● Returned after lapse

RECOMMENDATION

Protect Champions (24% of households, 51% of sales) and trigger win-back on each household's own purchase rhythm: 98% of lapsing households come back.

DATA NOTE

Income exists for 801 of 2,500 households. Week slicers change sales, not segment counts. Retention line is a fixed result.

RECOMMENDATION

Place cross-department complements together (for example brooms next to cleaning supplies) and turn the highest-lift pairs into bundle offers.

DATA NOTE

6,499 commodity pairs from notebook 06. The department slicer filters on the first item of each pair.

Campaigns

Did campaigns really raise household spending, or did they target big spenders?

Event study

Weekly effect before and after campaign start (week 0), main control group. The CI crosses zero in every week.

Effect 95% CI low 95% CI high

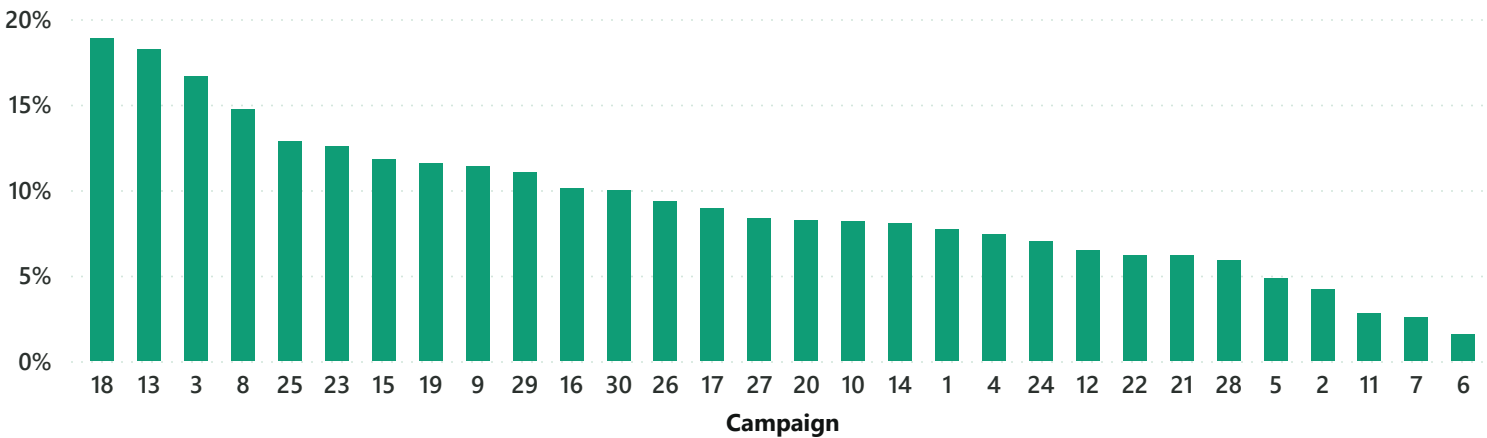

Campaign list

All 30 campaigns. Overlapping weeks make campaign effects hard to separate.

Campaign▲	Type	Start week	End week	Duration (days)	Households targeted	Households redeemed	Redemption
1	TypeB	50	55	38	13	1	7.7%
2	TypeB	51	55	33	48	2	4.2%
3	TypeC	52	60	57	12	2	16.7%
4	TypeB	54	58	33	81	6	7.4%
5	TypeB	55	59	35	166	8	4.8%
6	TypeC	57	61	33	65	1	1.5%
Total					1,584	434	12.3%

Redemption by campaign

Share of targeted households that redeemed a coupon, highest first.

RECOMMENDATION

Add random hold-out groups to every campaign and stop overlapping campaigns: the \$31.40 naive gap shrinks to \$1.03 (not significant) once selection is removed.

DATA NOTE

Effect estimates come from notebook 07 (stacked DiD with propensity matching) and do not change with slicers.
